

Enterprise AI, built to run in your environment.

Foundation-first AI consulting. IBM-grade infrastructure. Built for regulated enterprises.

Presented By: Amaranth Bagineni

Every enterprise wants AI. Most can't get it to production.

What we hear from Heads of Data and AI across banking, insurance, telecom, retail and FMCG.

73%

of GenAI PoCs

stall before production

Promising demos, real budgets, but the path from PoC to a live regulated workload keeps stretching.

6-9

month average lag

for governance to catch up

Security, audit, and risk reviews come after the build. Rework is expensive and morale-killing.

1 in 4

data scientists

spend most days on data prep

Your team built models. Your data wasn't ready. Talent burns on plumbing instead of value.

Greyquill is foundation-first AI consulting.

We fix the data layer first. Then we deploy AI agents that actually run in production.

WHAT THAT MEANS

Most AI projects fail because data is messy, models are bolted on, and governance is an afterthought.

We do it in the opposite order.

Clean the data. Structure it for AI. Deploy agents on top. Make every action auditable from day one.

1

SPEED

From idea to live agent in weeks.

Our 7-phase method short-circuits the PoC graveyard.

2

GOVERNANCE

Regulator-ready from the first action.

Audit evidence assembled as the system runs, not at quarter-end.

3

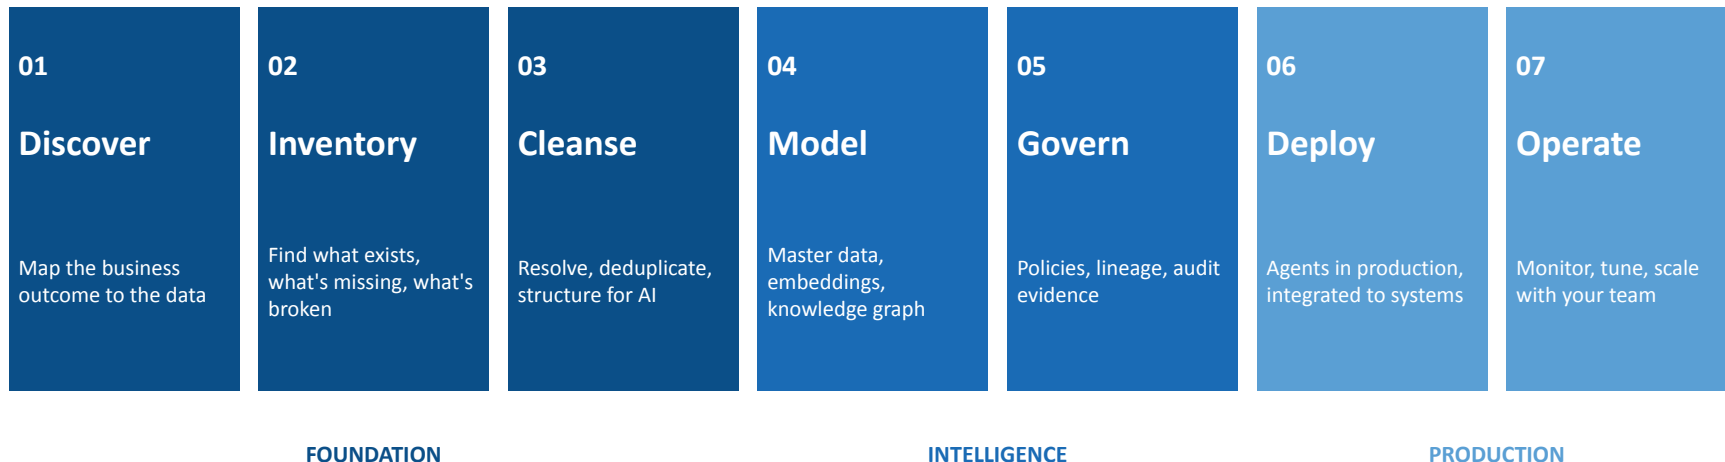

COST

Cheaper than building it in-house.

No headcount tower, no greenfield platform. Use what IBM already gave you.

The Greyquill Method — a 7-phase path to production AI.

The same framework we used at Walmart, Standard Chartered, Google, and Vanguard.

Each phase has a defined deliverable. Each deliverable is yours to keep. No black boxes.

ClarityAI — 13 specialised agents working as one team.

Not one general-purpose chatbot. A coordinated agent platform engineered for enterprise outcomes.

13 specialised agents

9 stage pipeline

6 layer validation

94% production accuracy across deployments

DATA AGENTS

Profiler · Cleanser · Resolver · Lineage

KNOWLEDGE AGENTS

Indexer · Retriever · Synthesiser

DOMAIN AGENTS

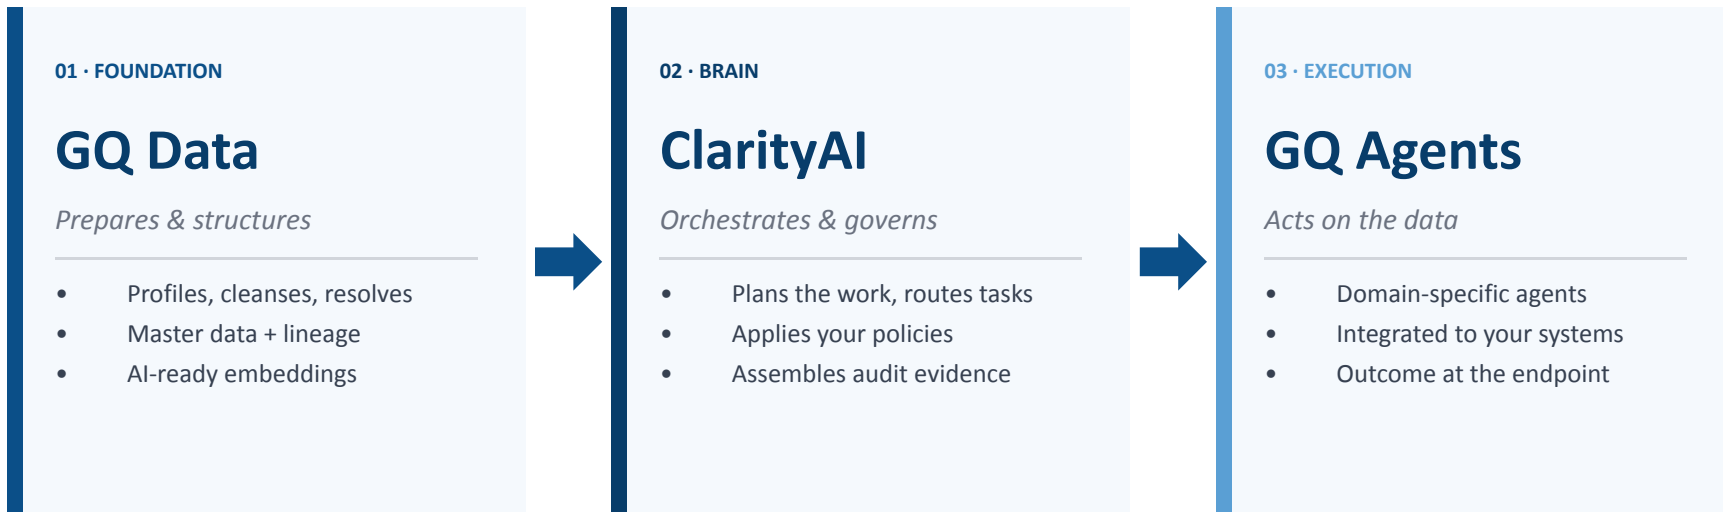

Compliance · Analyst · Forecaster

ORCHESTRATION

Router · Validator · Auditor

Three components. One outcome.

ClarityAI is the brain. GQ Data prepares the ground. GQ Agents do the work.

OUTCOME A working AI capability your team can defend, extend, and run.

Same stack. Different domain agents.

GQ Data and ClarityAI stay constant. The GQ Agents are tuned per industry.

CONSTANT ACROSS INDUSTRIES

GQ Data · prepares & structures

ClarityAI · orchestrates & governs

TUNED PER INDUSTRY

BANKING

GQ AGENTS

- KYC reviewer
- AML flagger
- Policy mapper
- Audit packer

60% faster regulatory cycle

INSURANCE

GQ AGENTS

- Doc ingester
- Risk scorer
- Underwriter assist
- Lineage tracer

80% faster underwriting

TELECOM

GQ AGENTS

- Identity resolver
- Churn predictor
- Segment builder
- Offer optimiser

Production at 40M+ records

RETAIL / FMCG

GQ AGENTS

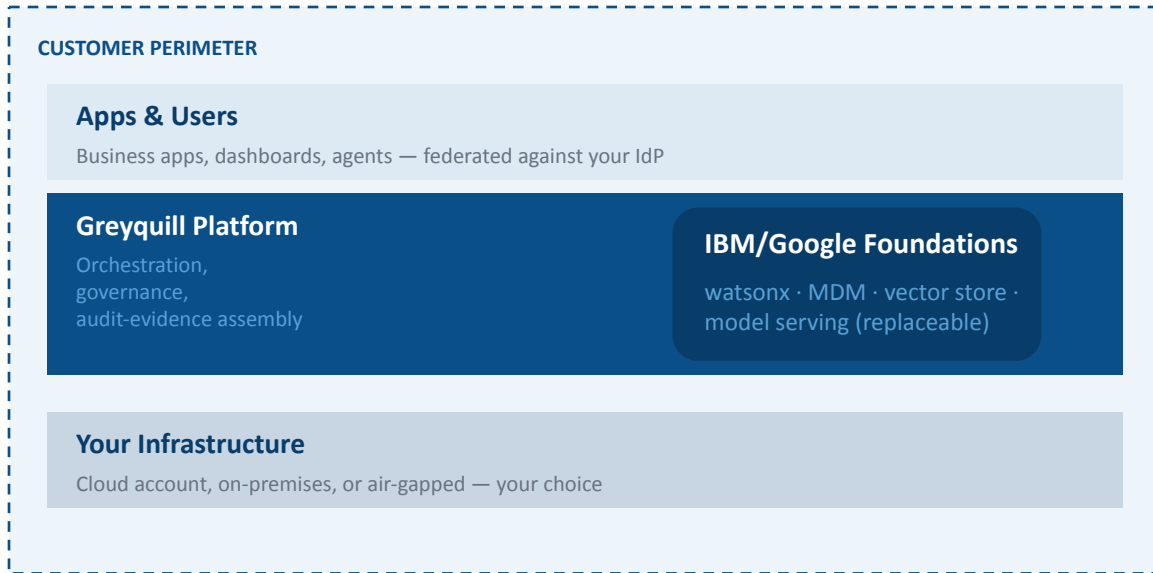

- Demand forecaster
- Promo planner
- Stock balancer
- Range editor

30% forecast accuracy lift

New industry, new agents. Same foundation. Same governance. Same audit trail.

Inside your perimeter. On infrastructure you already trust.

Cloud, on-premises, or air-gapped. Your data never leaves without your agreement.

● Bring Your Own Identity

Entra · Okta · Ping · IBM Verify. Your IdP is the source of truth.

● Audit Evidence by Design

Every action logged with inputs, model version, policy result, lineage.

● Portable Artefacts

Master data, agents, governance config, model artefacts — all yours.

Why Greyquill chose IBM. Why IBM chose Greyquill.

We sell better together. You get one accountable team and one battle-tested stack.

RECOGNISED

**Stack your security team
already trusts.**

watsonx.ai, watsonx.data, MDM, IBM Verify. Already reviewed, accepted, deployed in enterprises like yours. No 12-month vendor security review.

ACCOUNTABLE

**One throat to choke, one
team to thank.**

Greyquill delivers the outcome. IBM stands behind the foundation. Procurement is simpler. Escalations have an owner.

REPLACEABLE

**Open interfaces. No
architectural lock-in.**

Default to IBM because it works. Swap any component for an equivalent your standards prefer. Greyquill works against open contracts, not SKUs.

Built across industries you'd recognise.

Four examples of what the method delivers. Names available on request under NDA.

BANKING

Compliance co-pilot for a Tier-1 bank

60% reduction
in regulatory review cycle

Agent-assisted policy mapping, lineage assembly, and audit evidence packs for AML and KYC operations.

INSURANCE

Underwriting intelligence for a multi-line insurer

40% faster
underwriting decisions

Document ingestion, risk scoring, and structured handoff to underwriters with full lineage to source.

TELECOM

Customer intelligence for an SEA telco

2.5+ years
production engagement

Master data resolution across 40M+ customer records. Agents for churn, segment, and offer recommendation.

RETAIL / FMCG

Supply intelligence for a regional retailer

30% lift
in forecast accuracy

Demand forecasting with embedded promotion and weather signals, deployed inside the customer's SAP environment.

Two weeks from this conversation to a defensible plan.

Low-commitment start. Clear deliverables at each step. You exit any time with what we've built.

No headcount tower. No infrastructure procurement. No six-month POC.

THE ASK

Give us 90 minutes.

We'll give you back a defensible plan.

YOU BRING

- Your security, data, and AI leads
- One business outcome you'd like to test
- 90 minutes on the calendar

WE BRING

- Senior architect and governance lead
- The Greyquill Method, applied to your environment
- A written posture document the next day
